

HEALTHSTORE · ALPHA

# Site Information Architecture

Sitemap, navigation model, page inventory and primary user flows for the NHS HealthStore alpha — documenting the service as it stands today.

**Scope:** This document describes **live, user-visible functionality only**, as observed in the current open-access alpha build. Features that are hidden, disabled or feature-flagged off are deliberately excluded.

## HOW TO USE THIS DOCUMENT

Use pages 4–5 for structural conversations (what exists and how it is organised), page 6 for content and CTA audits, and pages 7–9 when discussing the commissioning journey with stakeholders. The HTML source of this document is editable — open it in a browser, click “Enable editing”, amend, and re-print to PDF.

## 01 · Scope & approach

### What this document is

An as-is record of the NHS HealthStore alpha's information architecture, captured on 28 July 2026. It documents every page a user can actually reach through the live navigation and on-page links, the global navigation furniture, and the journeys those pages support.

### The service in one paragraph

HealthStore is a public, open-access storefront for NHS commissioners. It lets them browse an assured catalogue of digital therapeutics by care pathway, review detailed product profiles (evidence, commercial and implementation information), compare up to four products side by side, scan funding opportunities, read supporting guidance and case studies, and express interest in a product via a structured multi-step form. There is no purchase or checkout — “express interest” is the commercial front door.

### Method

- Walked every navigation entry point and followed all on-page links from the live build.
- Verified each page renders and is reachable without sign-in (the alpha runs in open access — no account is required and no sign-in is offered).
- Cross-checked against the codebase to confirm nothing reachable was missed.

### EXPLICITLY OUT OF SCOPE

Functionality that exists in the codebase but is currently **hidden, disabled or unreachable** is not documented here. This includes anything behind feature flags or auth gates, legacy URL redirects, and pages with no inbound links. If any of these are switched on, this document should be re-issued.

### CONVENTIONS USED

Throughout the document:

- **CONTENT** primary content page
- **ACTION** page containing the journey's key call to action or form
- **UTILITY** policy / housekeeping page
- /apps/[slug] — square brackets denote a dynamic URL segment (one page template, many products)

### COUNTS AT A GLANCE

- 15 distinct visible pages (13 static + 2 dynamic templates)
- 5 primary navigation items + logo home link
- 1 conversion journey (express interest)
- 0 pages requiring sign-in

02 · Sitemap — all live, reachable pages (reads left to right; top-level order mirrors the header navigation)

■ Entry point    □ Hub (fans out to children)    ▨ Dynamic template (one per product)    □ Utility (footer only)

# 03 · Global navigation model

Global chrome as rendered on every page. On narrow viewports, overflow navigation items collapse into an NHS-pattern “More” dropdown — the link set is identical; there is no separate mobile menu structure.

## Header — 5 items + home

| ITEM                   | DESTINATION        | BEHAVIOUR                                                   |
|------------------------|--------------------|-------------------------------------------------------------|
| NHS logo / HealthStore | /                  | Always visible                                              |
| About                  | /about             | Always visible                                              |
| Product catalogue      | /product-catalogue | Always visible                                              |
| Comparison tool        | /compare           | Shows a count badge when products are in the compare basket |
| Funding index          | /funding-index     | Always visible                                              |
| Resource library       | /resources         | Always visible                                              |

## Persistent furniture

- **Phase banner (Alpha)** — sits directly beneath the header on every page, signalling service maturity.
- **Footer** — a single link: Cookies. Deliberately minimal for the alpha.
- **Cookie consent banner** — first-visit overlay for analytics consent; consent can be reset from the Cookies page.

### DESIGN OBSERVATION

The whole service is open access: there is no sign-in, no account area, and therefore no logged-in/logged-out navigation states to design for in the current alpha.

## 04 · Page inventory

| PAGE                                       | URL                                     | TYPE    | PURPOSE & KEY CONTENT                                                                                                                                                                                                                                        | PRIMARY USER ACTIONS                                                               |
|--------------------------------------------|-----------------------------------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------|
| Home                                       | /                                       | CONTENT | Landing page: value proposition hero, “how HealthStore works” storytelling, supported pathways, case-study highlights.                                                                                                                                       | Find out more → About · pathway chips → filtered catalogue · see all case studies  |
| About / How it helps                       | /about                                  | CONTENT | Explains the service's value: assurance, accountability, impact modelling and the commercial route. Informational only.                                                                                                                                      | Read; return via breadcrumb / global nav                                           |
| Product catalogue                          | /product-catalogue                      | CONTENT | Catalogue hub: browse digital therapeutics by care pathway (condition cards with product counts) plus a “coming soon” roadmap strip.                                                                                                                         | Pick a condition → filtered list · Browse all products                             |
| Digital therapeutics list                  | /product-catalogue/digital-therapeutics | CONTENT | Search and filter the assured product list; product cards summarise each offer; related-content links in the sidebar.                                                                                                                                        | Filter/search · View product details · Add to compare                              |
| Product detail page                        | /apps/[slug]                            | ACTION  | The key template: hero and proposition, commissioning snapshot, then a ten-section narrative spine (problem → pathway change → local impact → funding → assurance → implementation → NHS experience → procurement → resources). See page 9 for full anatomy. | Express interest · Add to compare · follow funding links · on-this-page navigation |
| Express interest                           | /apps/[slug]/express-interest           | ACTION  | Multi-step form capturing a commissioner's interest in a specific product — the service's conversion point.                                                                                                                                                  | Complete steps → submit → confirmation · links to guidance and back to product     |
| Comparison tool                            | /compare                                | CONTENT | Side-by-side comparison table for up to 4 products added from the catalogue or product pages.                                                                                                                                                                | Remove products · Clear all · empty state links back to catalogue                  |
| Funding index                              | /funding-index                          | CONTENT | Directory of open, upcoming and closed funding opportunities relevant to catalogue products.                                                                                                                                                                 | Open external funding links · jump to related product pages                        |
| Resource library                           | /resources                              | CONTENT | Hub for supporting content, fanning out to four collections.                                                                                                                                                                                                 | Choose a collection (guidance / news / campaigns / case studies)                   |
| Guidance · News · Campaigns · Case studies | /resources/... (4 pages)                | CONTENT | Collection pages: commissioning guidance, service news, active campaigns, and real-world case studies referenced from the home page.                                                                                                                         | Read · cross-links between collections and back to home                            |
| Cookies                                    | /cookies                                | UTILITY | Cookie and analytics policy.                                                                                                                                                                                                                                 | Reset cookie consent choice                                                        |

# 05 · Primary user flow — discover, assess, express interest

The core service journey for a commissioner. There is no basket or checkout — the expression of interest is the commercial hand-off, after which the conversation moves off-platform. Every step is reachable without an account.

HAPPY PATH

COMMON DETOURS FROM STEP 4 (PRODUCT DETAIL PAGE)

SERVICE DESIGN NOTE

The journey is fully self-serve up to submission. The moment of hand-off (step 6) is the boundary of the digital service — follow-up currently happens outside HealthStore, which is worth making explicit in stakeholder conversations about scope.

# 06 · Supporting flows

A — COMPARE SHORTLISTED PRODUCTS (ENTERED FROM CATALOGUE, PRODUCT PAGES, OR HEADER)

B — EXPLORE FUNDING (ENTERED FROM HEADER OR PRODUCT PAGES)

C — LEARN AND BUILD CONFIDENCE (ENTERED FROM HEADER, HOME, OR CATALOGUE SIDEBAR)

## PATTERN ACROSS ALL THREE FLOWS

Every supporting flow is designed to feed back into the primary flow at the product detail page or catalogue. The IA has a single centre of gravity — the product profile — which keeps the model simple to explain and test.

07 · Product detail page anatomy — the service's key template (/apps/[slug]), as live on myCOPD and Luscii

Breadcrumb: Product catalogue → Digital therapeutics → {product}

Hero & proposition

Product name, supplier, pathway tags, proposition, quick facts (NICE reference · assurance status)

Primary actions

Express interest (primary CTA) · Add to compare

Commissioning snapshot

Platform · Indicative cost · Technical integration · Live NHSE sites — each tile deep-links into the page

“On this page”  
side navigation  
(links to sections 4–13)

The problem {product} addresses

How {product} changes a treatment pathway — current vs with-product comparison

What using {product} could mean for COPD patients — local impact charts

What it could be worth — collapsible indicative financial context

Funding levers and tariff alignment

Assurance and evidence

Making it work at your site

NHS experience — deployment register, case studies and evaluations

How to commission and procure — ends with “Want to find out more?”  
Express interest callout

Resources — demo access; product videos where available

- 1 **Hero & proposition (1–2).** What the product is, its assured status, and the two decisions we ask of the user — commit (express interest) or shortlist (compare) — before the long-form content begins.
- 3 **Commissioning snapshot.** Four scannable tiles for time-poor commissioners; each deep-links to the relevant section (cost → how to commission, sites → NHS experience, demo → resources).
- A **"On this page" navigation.** Sticky side navigation listing all ten narrative sections, so users can jump straight to funding or assurance — the two most-asked-about topics.
- 4 **Narrative spine (4–13).** Sequenced to answer a commissioner's questions in the order they arise: what problem is this solving (4–5), what would it mean here (6–7), how is it paid for (8), is it safe (9), what does it take (10), who else has done it (11), how do I buy it (12), and where do I dig deeper (13).
- 12 **Second conversion point.** The express-interest callout repeats at the end of "How to commission and procure", catching users who arrive at commitment only after reading the full case.

MYCOPD VS LUSCII — SAME TEMPLATE, CONTENT-LEVEL DIFFERENCES

Both products render this exact structure. Differences are in content, not anatomy: myCOPD additionally shows a linked funding scheme (under 8), onboarding / ongoing-support steps (under 10) and product videos (under 13); Luscii additionally shows a technical integration tile (FHIR · EMIS) in the snapshot. Impact charts (6) are modelled per product. There are no detail tabs on either page.
